

Landshypotek Bank

Investor presentation

- fourth quarter 2025

2026-02-04

Table of content

- 1) Working for a richer countryside
- 2) Sustainability & ESG
- 3) Agriculture market overview
- 4) Housing market overview
- 5) Financial update
- 6) Asset quality
- 7) Capital adequacy
- 8) Funding, liquidity and cover pool
- 9) Contacts and financial calendar

Executive summary:

- Low-risk market leading agriculture and forestry bank with sustainability integrated in the strategy with a market share of 24%
- Sustainable governance where profit is reinvested or returned to the agriculture and forestry sectors
- The bank for the conscious choice of mortgage loans and savings
- A lending portfolio with a positive climate footprint
- Low-risk business model
 - 99.8% of the loan portfolio is first-lien mortgages
 - Average LTV is 44%
 - 99% of the customers have a personal liability
 - Total losses since 1985 SEK 373m, average per year 0.026%

Working for a richer countryside

In short:

- Landshypotek Bank's vision is to enhance life in the countryside
- A leading low risk bank in the agriculture and forestry sectors and challenger in mortgage market
- Strategy

Treasure our position in the market and value what it stands for

Grow with new and existing customers, primarily within in the retail market (agriculture and residential)

Become a larger bank with better profitability and higher efficiency for us and our customers

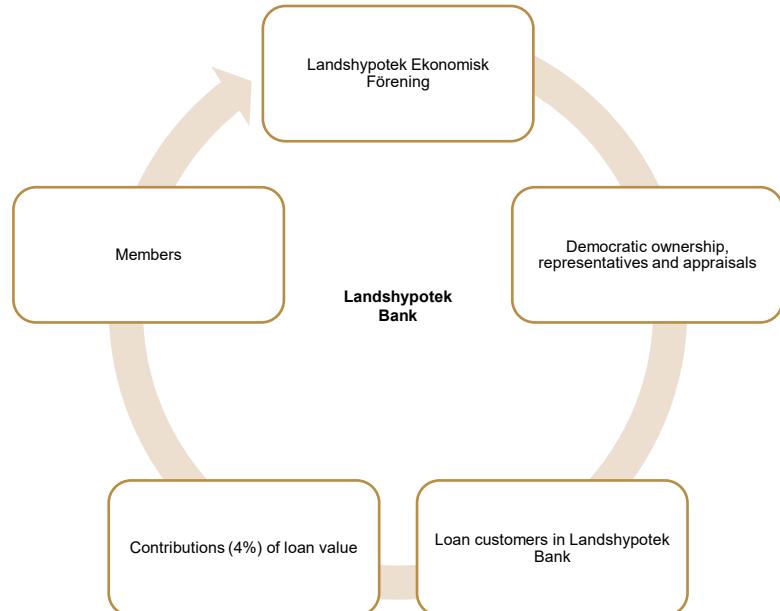

With the same purpose since 1836.

Boring? Never.

- It all started in 1836 with the very first building society. Our main task is to provide competitive financing and to offer financial services to Sweden's farmers and foresters.
- Since 2017, we have challenged the mortgage market by offering competitive interest rates that enables people to live well across the country. Structural changes within the agricultural landscape made it even more natural for us to take this step.
- Our main focus is mortgages and we understand the importance of the place where people chose to live or develop their business within agriculture and forestry
- We strive to be a sustainable bank offering solid and long term financial services and competitive terms for savings
- We offer mortgages for agriculture, forestry and residential as well as savings accounts
- Collaborations are actively chosen and part of our future

Landshypotek is more than just a bank

- 32,000 loan customers are members of Landshypotek Ekonomisk Förening, the foundation of a long term governance structure
- Landshypotek Ekonomisk Förening is sole owner of Landshypotek Bank
- All business is conducted in the bank
- Purpose: Provide competitive financing and to offer financial services to Sweden's farmers and foresters. Focus for 120 elected representatives:
 - Owning the bank
 - Representing the members in a democratic organization
 - Represent Landshypotek in the market
 - Execute real estate appraisals

Position, focus and strategy

Treasure our position in the market and value what it stands for

Grow with new and existing customers but primarily within in the retail market (agriculture and residential)

Become a larger bank with better profitability and higher efficiency for us and our customers

Sustainability and ESG

In short:

- Sustainability embedded in the business model
- A lending portfolio that stands out – great absorptions and essential emissions
- Four material sustainability topics set the agenda – climate change, biodiversity, own workforce and governance
- Updated Green Bond Framework to facilitate the transition within agriculture

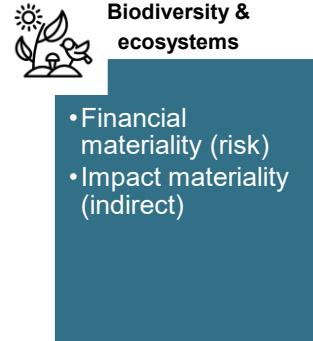

A lending portfolio that stands out

- Landshypotek's lending portfolio differs from other Swedish banks. The **vast majority of Landshypotek's lending is to agriculture and forestry** – two sectors that are dependent on photosynthesis and other ecosystem services.
- The forest is a **key link in the transition to a fossil-free society** as forest-based raw materials are renewable, recyclable and biodegradable.
- Forests and arable land are **carbon sinks** with a considerable potential to store even more carbon.
- Cultivated land and grazing animals are essential for **biodiversity and diversified landscapes**.
- Pastures, fields with crops and forest lands are **essential for other ecosystem services** like absorption of heavy rains, cleaning of ground water and soils provide habitats for thousands of species.
- Swedish farms maintain **high standards for animal husbandry, environmental conditions and food quality**.
- Moreover, forestry and farming are the only two sectors that can **create biodiversity and other ecosystem services**. The two sectors are further crucial for Sweden's **self-sufficiency and preparedness** in times of crises.
- Forestry and agriculture are **closely linked** – if you are a farmer you are a forest owner too.

Material sustainability topics

- Landshypotek completed a double materiality assessment during 2024.
- The double materiality assessment concluded that the bank's material sustainability topics are:
 - Climate change
 - Biodiversity and ecosystems
 - Own workforce
 - Governance
- Policies, actions and targets within each material sustainability topic will be the foundation of Landshypotek's sustainability agenda.
- Although the bank is no longer covered by the formal reporting requirements under the CSRD/ESRS, Landshypotek will continue to publish an annual sustainability report in a manner that is inspired by the CSRD/ESRS.

Pollution, Water and marine resources, Circular economy, Employees in the value chain, Affected communities and Consumers and End-users are not considered to be material at this time.

Climate and nature related risks for lending portfolio

Transition risks

- Political decisions e.g. taxation of fossil fuels used in machinery, CO₂-pricing such as an emissions trading system for agriculture, land use regulations (e.g. EU Nature Restoration Law) and mandatory renovation requirements to improve energy efficiency in buildings.
- Change in consumer and investor demands.

Climate indicators and physical risks

 **Temperature** will lead to other risks like drought and heatwaves

 **Fire risk** can lead to the destruction of forests and lost growth

 **Length of growing season** will provide a greater opportunity for higher yields and crop variation but higher risk of increased pressure from vermin

 **Extreme precipitation** causes flooding and extreme rainfall can destroy crops and provide challenges for using machinery and damage to property

 **Heatwaves** place stress on growing crops and livestock whilst increasing the risk of lower yields

 **Elevated sea levels** pose a risk for properties in exposed areas

Landshypotek Bank's impact

- Through customer dialogue inform and discuss methods and investments for adaptation and emission reductions
- Credit analysis and appraisals include sustainability aspects from a climate and environmental perspective
- Credit analysis includes ESG risks and opportunities as part of SWOT analysis
- Finance projects and investments which adapt the business to a changing climate or reduce their impact on the climate

Complex sector exposure

- Agriculture and forestry are dependent and crucial for nature as we know it. There are no closed systems which increases the complexity to fully understand the consequences of a changing climate

Climate change

Our impact is primarily within our lending portfolio

- Climate transition plan zero is revised annually with the overall aim of achieving net missions in the lending portfolio by 2045 at the latest.
- The transition plan focused on removing the use of fossil fuels within agriculture as this is the most urgent abatement measure within agriculture and forestry – and one that the bank can finance.
- The bank's residential mortgage portfolio largely follows the national distribution of Energy Performance Certificates.
- The bank can play an important role in financing energy efficiency measures in single-family houses (*småhus*) and a more indirect role in the improved energy efficiency of residential apartments.
- Landshypotek's own emissions are primarily driven by energy used in our offices and work-related travel.

Landshypotek Bank's transition plan in short

- Focus on agriculture
- Political governance is necessary
- Biological processes
- Fossil free agriculture

Direction, goals and activities

#1	The bank will have a targeted offer for investments in emissions reduction measures and climate adaptation.
#2	The bank will annually carry out dedicated training initiatives for agricultural and forestry customers on the agricultural sector's climate risks and climate transition.
#3	The issued volume of green bonds shall increase by 50% by 2030, based on the 2024 level of SEK 11.5 billion.
#4	The bank's employees shall receive annual training in relevant climate-related topics. Board, management group, risk function and business organization shall, at least second year, participate in advanced training initiatives on relevant issues related to the climate transition within Swedish agriculture and housing.
#5	Climate-related risks are integrated into all aspects of the bank's risk management, from ongoing customer dialogue to customer pricing. The bank will use a pricing model towards customers that considers climate risks.

Great absorptions and essential emissions

Biogen and fossil-based emissions

- There is a difference between the “green” and the “brown” carbon atom. One is part of the natural carbon cycle; the other one is not.

Emissions and absorption from land use

- LULUCF sector contributes to a yearly net absorption of greenhouse gases which is larger than Sweden's total emissions during 2024
- Most of the net absorption within the sector comes from forests and wood products
- Absorption (carbon pools) is found in the living biomass and mineral soils
- Increased growth and absorption in the forests following several years of lower growth due to drought and greater extraction caused by spruce bark beetle and greater demand

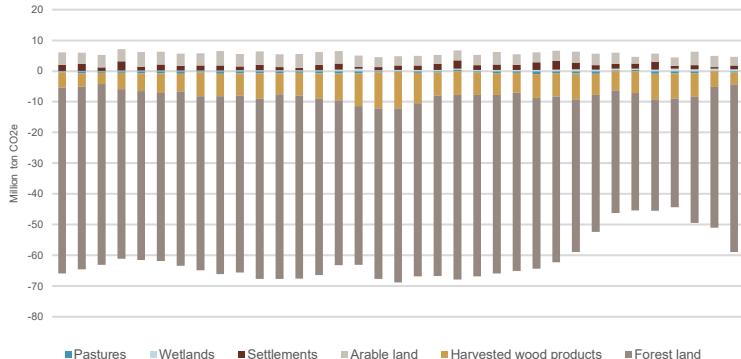

Emissions from agriculture

- Emissions in agriculture are driven by methane and nitrous oxide from animal feed digestion, manure handling and nitrogen conversion in soil
- The sector's emissions are based on biological processes, which makes the calculations uncertain, especially nitrous oxide emissions from nitrogen supply to arable land
- The agricultural sector is the largest source of emissions of the greenhouse gases methane and nitrous oxide

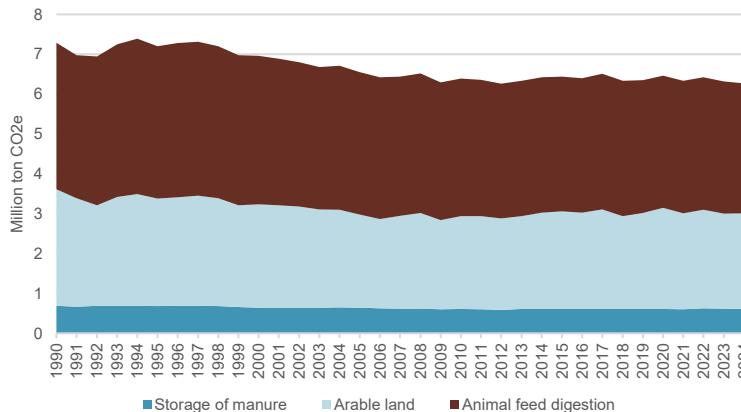

Emissions from housing

- Emissions from housing, primarily heating, have decreased by 91% between 1990 (6.2 million tons CO₂e) and 2024 (0.3 million tons CO₂e). Remaining emissions are driven by energy sources for heating and consumption.

Emissions and absorption from land use in Sweden
1990-2024

Emissions from agriculture
1990-2024 in Sweden

Financed emissions and CO₂ absorption in the lending portfolio

Emission sources from activities on the land:

Emissions from:

milk production

beef production

pig production

crop cultivation

poultry

forestry

buildings

residential properties

Methane (CH₄)
Nitrous oxide (N₂O)
Carbon dioxide (CO₂)

Land use's emissions and absorption sources :

Absorption in the forest

Absorption in crop and grazing lands

Emissions from crop and grazing lands

Emissions from organogenic soils (e.g. peatlands)

Carbon (C)
Carbon dioxide (CO₂)
Nitrous oxide (N₂O)

Positive climate effect of the bank's lending portfolio

- The forest's absorption is greater than all emissions attributable to other land use and different land use segments.
- The result is shown based on the loan-to-value ratio and thus refers to the bank's financed emissions and absorption.

What causes the emissions?

- Emissions from soils (nitrous oxide, nitrogen compounds)
- Livestock's digestion of feed (methane)
- Manure (handling of manure and production of fertiliser)
- Energy use (livestock and machinery)

Variables for sensitivity analysis

- Nitrous oxide emissions (highly uncertain)
- Area of forest land (amortizations, loans paid off)
- Average number of animals used in calculations (ruminants)
- Handling of manure (assumption of 30% of Sweden's total emissions)

How can we increase the effect through reduced emissions?

- Dialogue with customers and other players in agriculture and forestry to jointly drive the climate transition
- Financing fossil-free energy production and energy-efficient buildings
- Plans for the opportunity to reward customers who use farming methods and make investments in food production with a lower climate impact

Financed emissions and absorption

Positive climate effect of the bank's lending portfolio

- The forest's absorption is greater than all emissions attributable to other land use and different land use segments.
- The result is shown based on the loan-to-value ratio and thus refers to the bank's financed emissions and absorption.

How can we increase the effect through reduced emissions?

- Dialogue with customers and other players in agriculture and forestry to jointly drive the climate transition
- Financing fossil-free energy production and energy-efficient buildings
- Plans for the opportunity to reward customers who use farming methods and make investments in food production with a lower climate impact

		Financed emissions/absorption with reference to LTV ratio (ton CO ₂ e)	Financed substitution effect with reference to LTV ratio (ton CO ₂ e)

Residential Housing		+ 3 000	N/A
Buildings		+ 24 000	N/A
Total emissions and absorption		- 770 000	
Total emissions, absorption and substitution effect		- 1 920 000	

Biodiversity and ecosystems

Our impact is primarily within our lending portfolio

- Landshypotek Bank finances Swedish agriculture and forestry. Agriculture and forestry are unique sectors in relation to biodiversity.
- Agriculture and forestry have a significant impact, positive and negative, upon biodiversity and ecosystem services. They are also the only sectors which can create biodiversity and ecosystem services.
- Landshypotek Bank's Position Paper on biodiversity is a first step to formalize our view, ambition and actions within the topic.

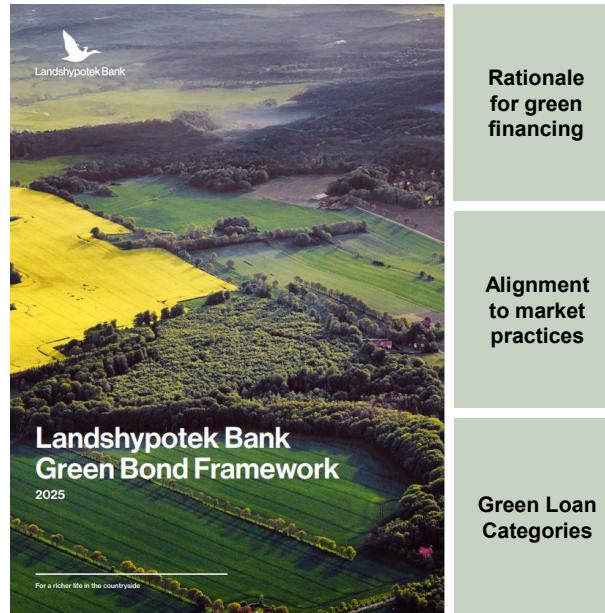

Risks and opportunities	Management of biodiversity	Direction and activities
<p>Physical risks e.g. invasive species and deterioration of the condition of the species.</p> <p>Transition risks e.g. EU's Nature Restoration Law.</p>	<p>Valuations include an assessment of factors that are relevant for biodiversity such as nearby Natura 2000 areas.</p> <p>A climate and environmental assessment is conducted for the bank's larger agricultural and forestry customers.</p>	<p>Targeted offer to customers creating, protecting and promoting biodiversity.</p> <p>Customer engagement and internal knowledge.</p> <p>Funding target in line with transition plan.</p>

Biodiversity is targeted in the bank's Green Bond Framework.

Green Bonds

- Landshypotek updated the bank's Green Bond Framework during 2025.
- Outstanding volume: 12bn SEK.
- Outstanding green bonds comprised of loans financing or refinancing land and investments in:
 - Sustainable Forestry
 - Sustainable Agriculture, namely precision farming, KRAV certified pastures (grazed by ruminants) and construction of ponds and drainage systems
- By 2030, Landshypotek aims to increase the volume of green lending by 50% compared to 2024 levels of 11.5bn SEK.

Own workforce

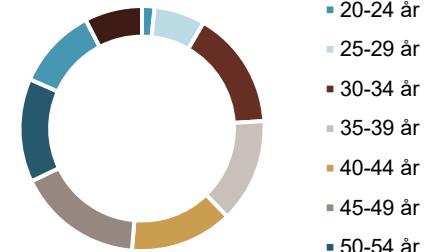

- Landshypotek has a significant impact on the bank's employees.
- With fewer than 250 employees across 19 offices all over Sweden, employees work with a broad range of tasks. This provides the opportunity for employees to develop and provides opportunities for internal recruitment.
- Being a Swedish-based bank, the bank already fulfils many of the fundamental requirements relating to right of association, paid parental leave, sick leave and retirement benefits.
- The overall gender balance within the bank and at management level is even but there are significant discrepancies within the management group and board.
- Measures to address the gender imbalance at the highest levels of the bank will be a key focus of the bank's agenda relating to its own workforce.

Governance

- Stakeholders' confidence in the bank is fundamental
- As a bank, Landshypotek has been required to meet strict legal requirements regarding governance matters including anti-corruption, anti-money laundering and handling conflicts of interest.
- Governance-related topics are dealt with across a broad number of policies, guidelines and instructions including those listed in the column to the right.
- Liquidity reserve comprises interest-bearing securities and excludes investments in direct operations in fossil-based energy production, nuclear power, research or development of weapons, potentially environmentally harmful extraction of resources (for example, rare earths or fossil fuel), gambling or tobacco.
- Sustainability reporting in a manner inspired by the CSRD/ESRS.

Agriculture market overview

In short:

- The margins for forest owners remain relatively favorable, although prices for sawlogs and pulpwood have decreased
- A storm in late December caused significant damage to forests in the southern and eastern parts of Norrland
- Specialized crop producers face a difficult economic situation due to weak 2023–2024 harvests, higher costs, and falling grain and oilseed prices
- The 2025 harvest was concluded to be the largest in several decades
- Animal producers benefit from lower feed costs, whereas dairy producers see profitability decline due to falling milk prices
- There is a significant investment need across the entire sector

Property price development 2005-2025

	1Y	5Y
Arable land	+1%	+18%
Forestry	+7%	+22%

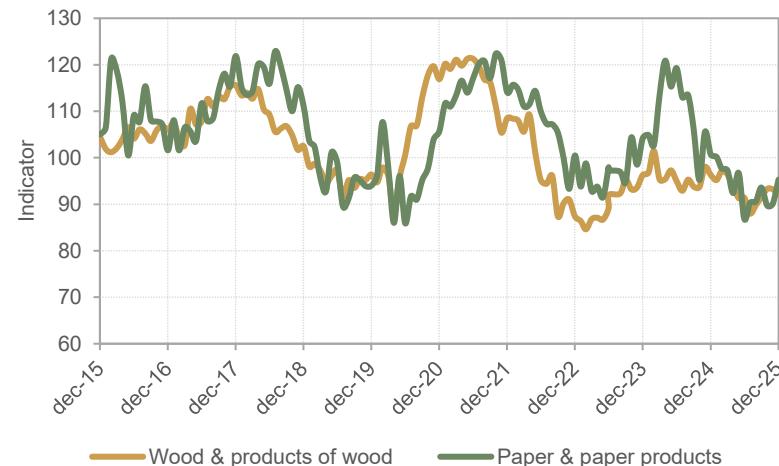

- Forest land prices rose by 7.1% in 2025, with the strongest growth in central regions and the weakest in the north
- Agricultural land prices were largely stable in 2025, with greater variation in intermediate and forested regions, while the long-term trend remains upward across all areas
- In Q4 agricultural property prices decreased by 2% compared to Q3, according to SCB. Property sales declined by 17% in Q4 compared to the same period 2024

Forestry

Roundwood price trend (Q3 2015 – Q3 2025)

Economic tendency Forest Industry (Dec 2015 – Dec 2025)

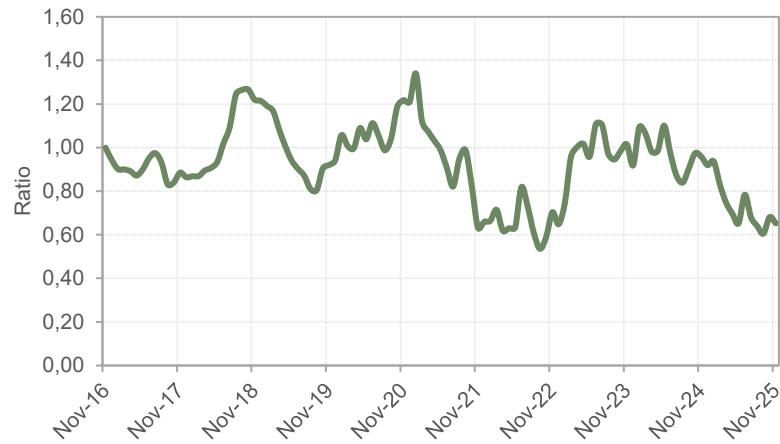

- Declining prices for sawlogs and pulpwood in recent months, reflecting continued pressure on the forest industry. Reduced export demand and a restrained domestic market have weakened the sector's payment capacity. Still, overall supply remains relatively limited.

- In late December, a storm caused extensive forest damage, particularly in southern and eastern Norrland. The impact is assessed as the most severe in a decade.

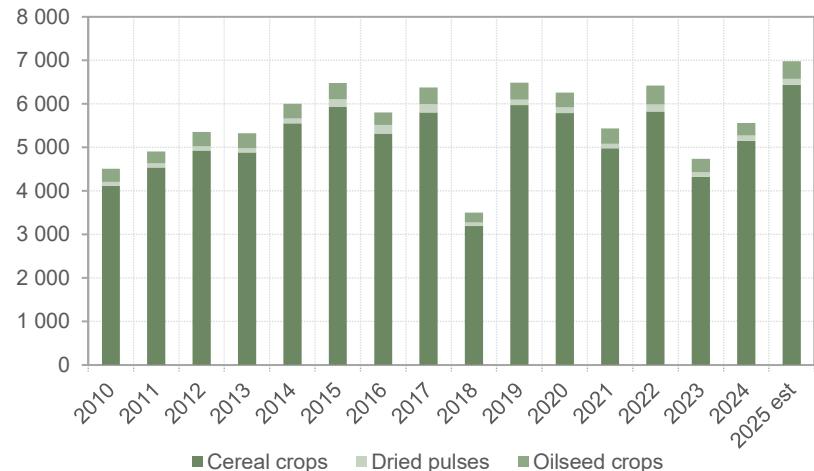

Data source: The Swedish Forest Agency, National Institute of Economic Research

Crops

Development grain / fertilizer price ratio (Nov 2016 – Nov 2025)

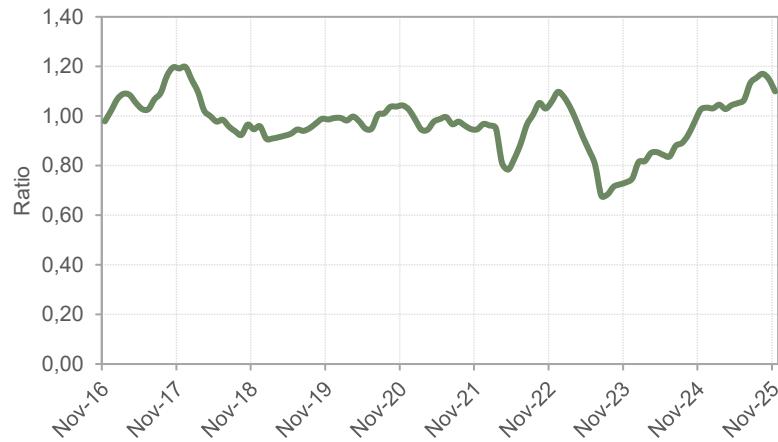

Production (1,000 tonnes)

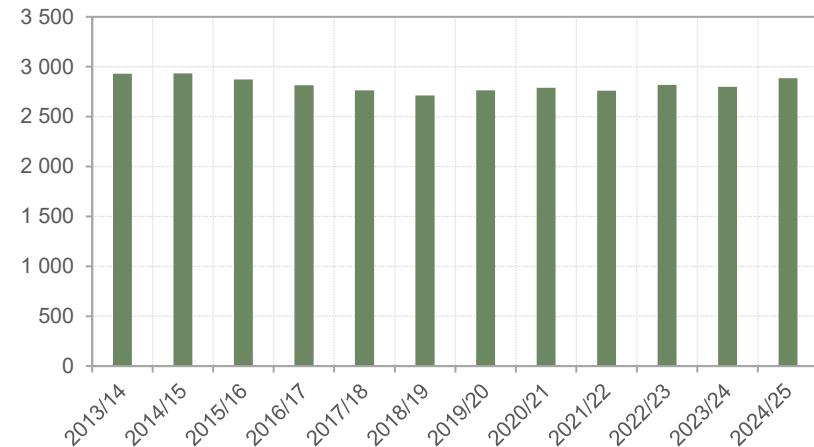

- Grain / fertilizer price ratio decreased by 4.6% in November compared to October due to increased grain prices. Compared to November 2024 the ratio declined 31%, due to lower grain prices and increased fertilizer price.
- The total yield of harvest of cereal crops, dried pulses and oilseed crops 2025 is estimated to around 6.8 million tonnes, which is 26% more than 2024 and 23% larger than average for previous five years

Dairy

Development milk / feed price ratio (Nov 2015 – Nov 2025)

Production, Dec – Nov (1,000 tonnes)

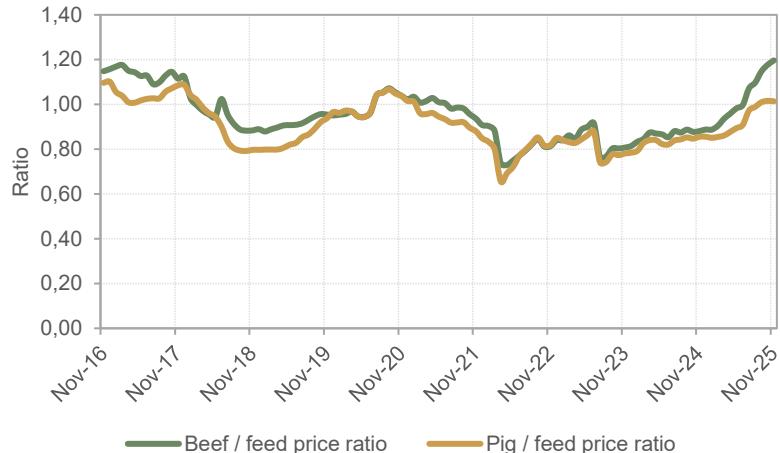

- Milk / feed price ratio decreased by 0.2% in November compared to October due to reduced milk price. The ratio was 14% higher than November 2024. Preliminary average milk price in December was approx. 12% lower than December 2024.

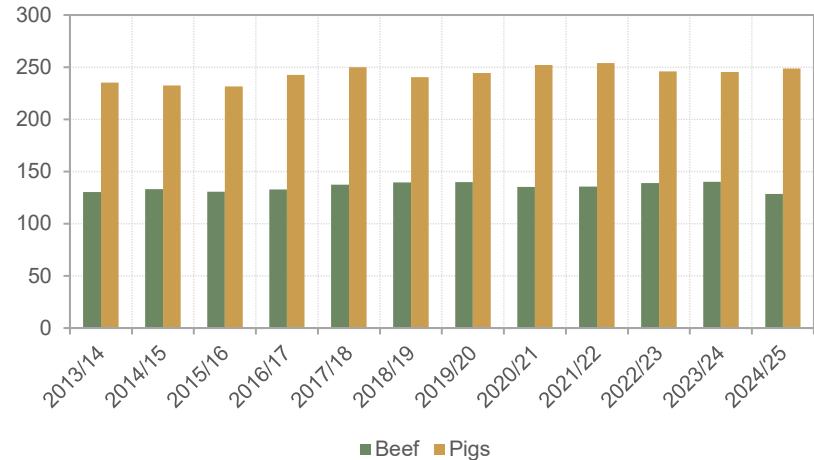

- Total production increased by 3.1% past 12 months compared to previous year. Latest three months production has increased by 6.4% year to year.

Cattle and Pig

Dev. beef/pig / feed price ratio (Nov 2015 – Nov 2025)

Production, Dec – Nov (1,000 tonnes)

- The price ratio improved in November compared to October for cattle, primarily as a result of higher beef prices. The ratio for pig was stable. Compared to November 2024 the pig/feed respectively beef/feed ratio improved by 36% and 19%.

- Past twelve months pig production increased by 1.3%. In September-November production was 1.6% higher compared to same period 2024. Beef production was 8.3% lower over the past twelve months due to decreased number of cattle.

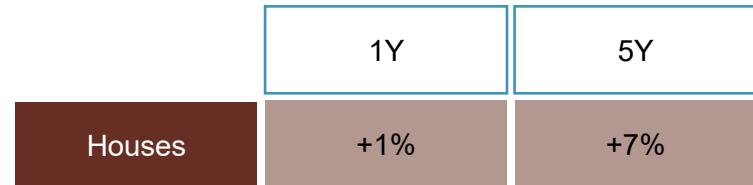

Data source: Swedish Board of Agriculture

Housing market overview

In short:

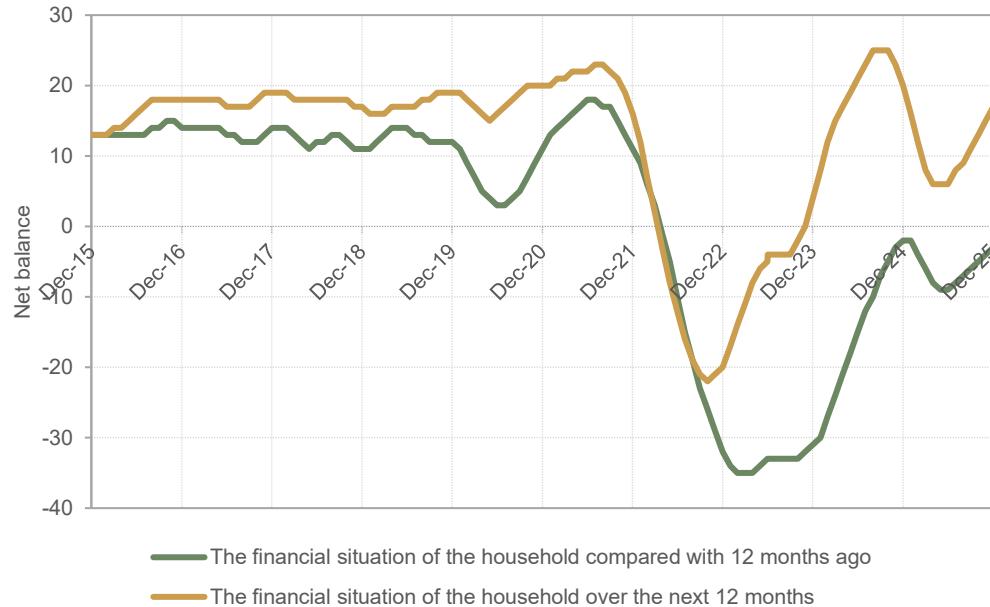

- Sentiment among consumers has improved, but is still weaker than normal
- The market continues to show a cautiously optimistic trend, with modest price increases

House price development Q4 2015 – Q4 2025

- The price remained relatively stable during Q4 with a modest price decline by 1.0% quarter over-quarter. Supply has decreased, with 15% fewer houses sold in Q4 compared with the same period in 2024.
- Improved sentiment is reflected in two-dwelling buildings prices being 7% higher than at the same time last year

The financial situation of the households 2015-2025

- The household confidence indicator remained largely unchanged in December and continues to reflect sentiment below normal levels. Confidence in the Swedish economy has weakened slightly, while households have become more optimistic about their own financial situation. Despite this, households remain cautious, with higher-than-normal savings and plans to reduce major purchases over the coming twelve months.

Financial update

In short:

- Higher net interest income during 2025 compared to 2024
- Expenses are higher compared to 2024, up due to the combination of inflation and a higher pace of investment
- Credit losses generated a negative net earnings impact of SEK -14 million
- From the fourth quarter of 2025, the resolution fee costs have been moved from net interest income to a new cost line item "Imposed fees." The comparative figures for the year 2024 have been restated.

Total expenses

Asset quality

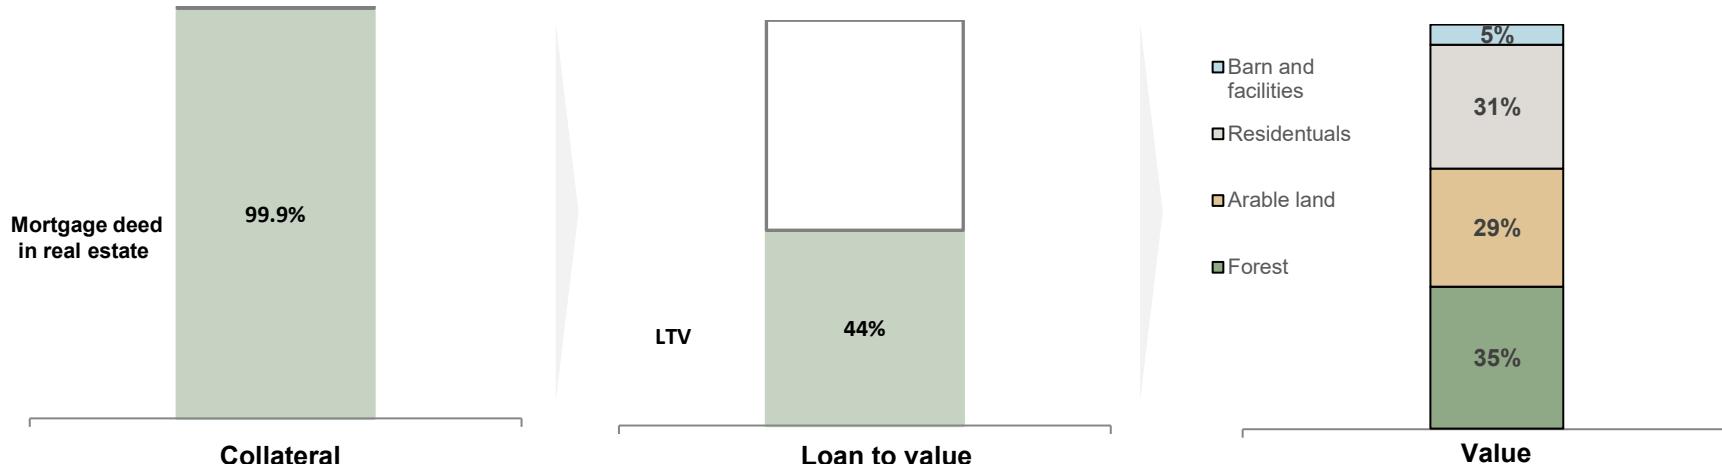

In short:

- Landshypotek Bank has 3 lines of defence that work together at different stages in order to mitigate risks. Risk organisation is the second line that is in charge of risk governance and control.
- 99% of customers have personal liability and 99.9% have post collateral with mortgage deed in real estate or tenant owned apartment
- Loan portfolio is collateralized with low LTV assets (44%)
- The value of arable land and forestry compose the majority of the collateral
- Well diversified portfolio in terms of geographical and business distribution
- Exposures are classified out of loan size, turnover and income
- Excellent performance

99% of customers have personal liability and 99.9 % post collateral with mortgage deed in real estate

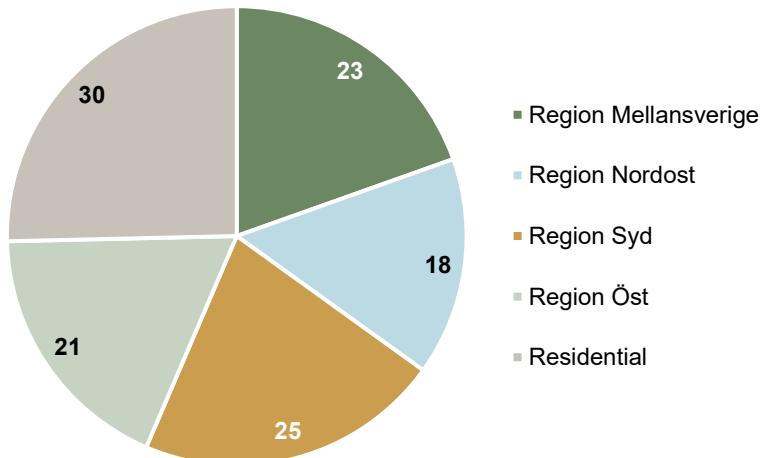

- Business is conducted as sole proprietorship (Sw. *enskild näringssidkare*) – due to Swedish legislation on land ownership
- Sole proprietorship is a private individual with personal liability
- Exposure weighted LTV 44%
- Customers post collateral with mortgage deed in real estate
- Capital intense in relation to turnover and earnings
- Structural changes lead to larger units
- The structural changes have been gradual

Loan portfolio is collateralised with low LTV assets

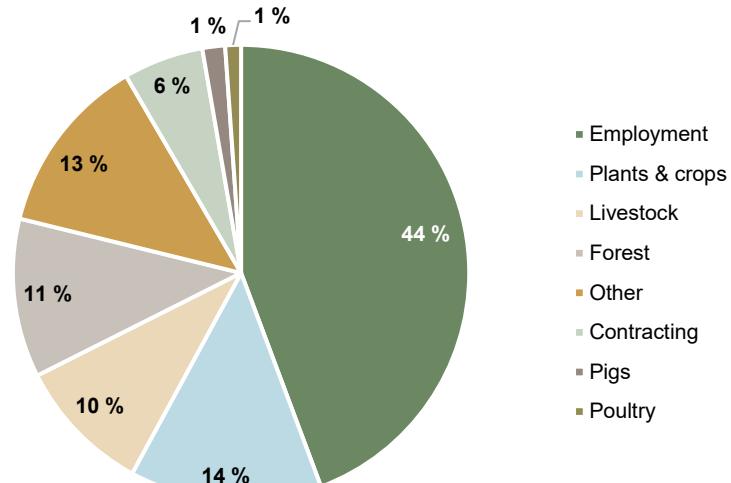

Well diversified portfolio in terms of geographical and business distribution

Asset portfolio per business unit, SEKbn

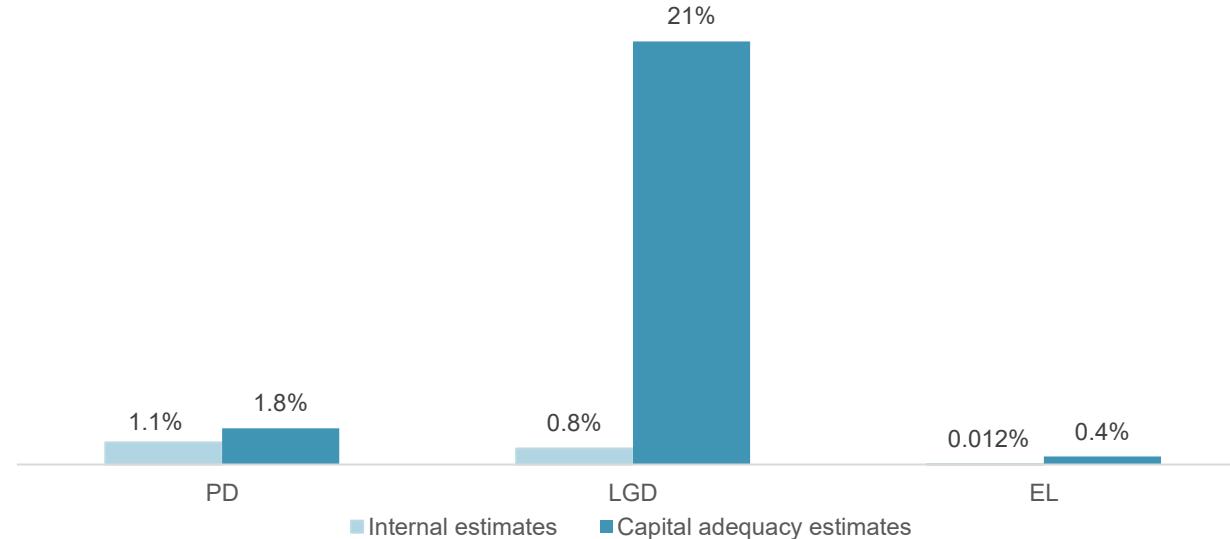

Asset portfolio, business distribution, %

Average loan per customer is SEK 2.0m

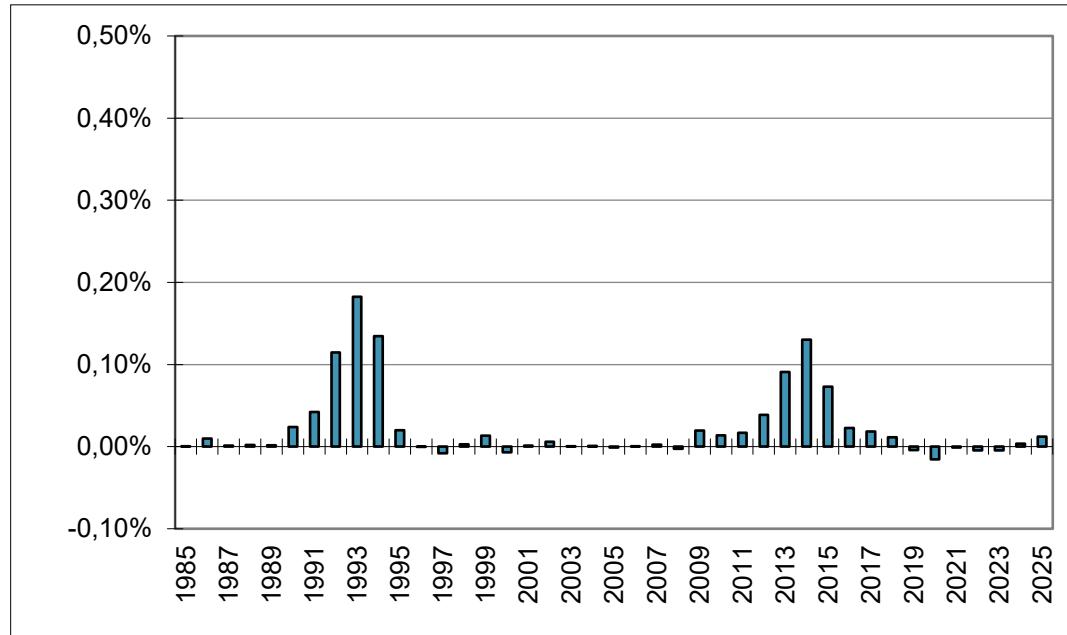

Internally used estimates are significantly lower than estimates for capital adequacy

Internally used estimates are significantly lower for PD, LGD and consequently EL. Exposure weighted LTV ratio is 44%

Great performance in credit losses due to high asset quality and solid processes

- 2025 accounts for 13.7m (0.012 %) in credit losses. Losses in 2024 amounted to SEK 3.7m (0.003%), compared with SEK -4.9m in reversals for 2023 (-0.01%).
- Total credit losses since 1985 amounts to SEK 373m which makes an average per year of 0.026% (in comparison: EL deduction of SEK 286m for a year)
- Continuous review of processes in identifying, monitoring and controlling credit risk in order to avoid potential credit loss
- The insolvency department and the workout unit are proactively handling customer insolvency

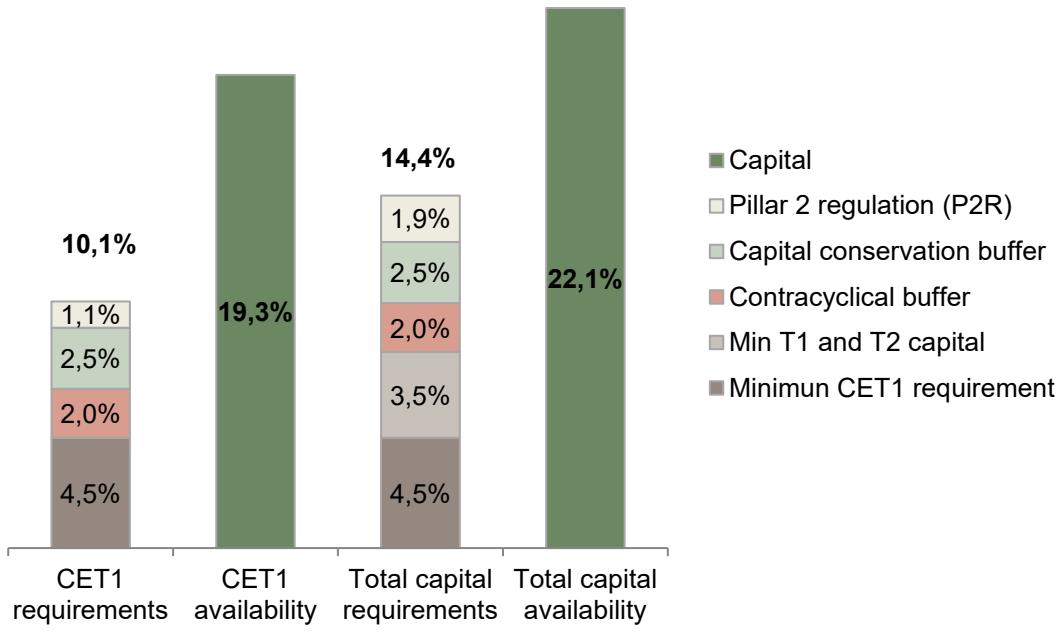

Capital adequacy

In short:

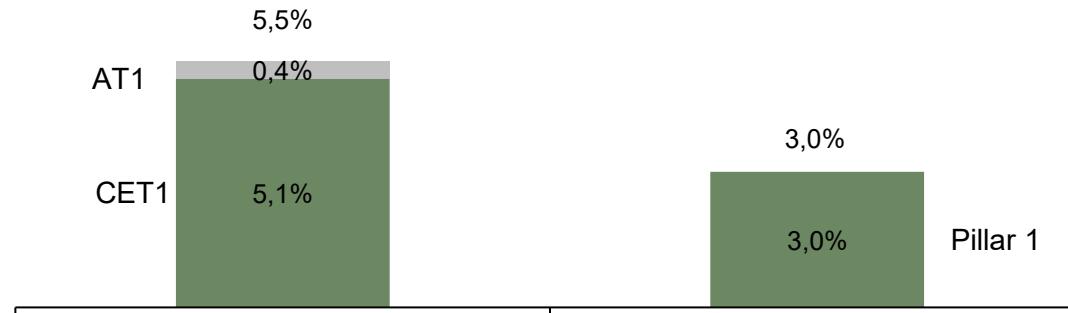

- CET1 capital ratio strong compared to requirements
- Landshypotek Bank has high leverage ratio

Total capital and capital requirements- Consolidated situation

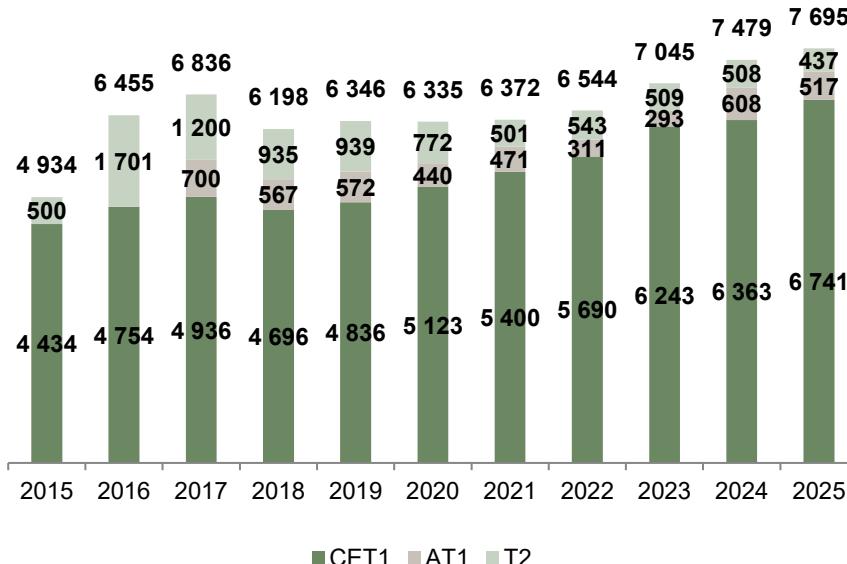

- The CET1 capital target is to have a CET1 ratio of at least 12.1%, including the internal capital buffer. The margin to the capital target as of Q4 2025 is 7.3% of REA.
- The Total capital target is to have a Total capital ratio of at least 15.4 %, including the internal capital buffer. The margin to the capital target as of Q4 2025 is 6.7% of REA.
- The stress tests performed by the bank for recovery planning and ICAAP confirms that the bank is very well capitalized and can sustain its business operations also under extremely adverse macro conditions
- The additional capital in the form of Pillar 2 guidance (P2G) of 0.5% is included in the internal capital buffer

Leverage ratio and capital requirements- Consolidated situation

Capital development over the years

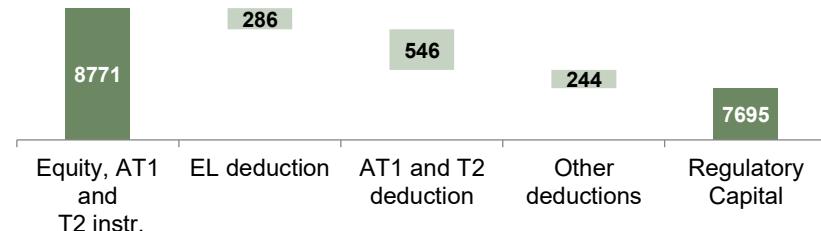

Total capital, SEKm - Consolidated situation

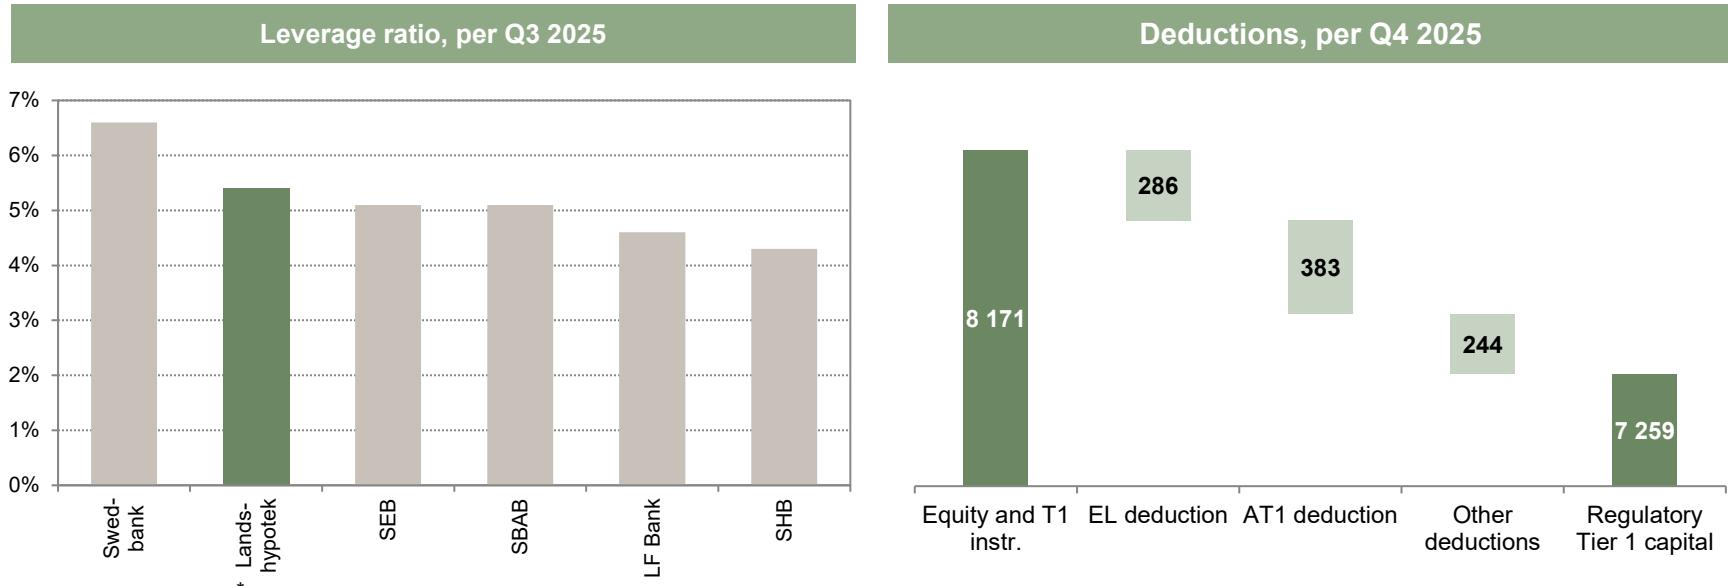

The EL deduction from CET1 is a consequence of using IRBF for corporate exposures. The EL calculation for corporate exposures is very conservative since it is calculated using IRBF regulatory prescribed LGD estimates as opposed to IRBA LGD estimates.

The deduction regarding AT1 and T2 capital at the consolidated situation is explained by the fact that subordinated loans issued by Landshypotek Bank cannot be fully utilized in the calculation of capital at the consolidated situation. However, as the utilization rate is calculated based on the surplus of capital compared to capital requirement (sum of pillar 1, pillar 2 and buffers), if the capital requirement were to be identical with the capital base, the subordinated loans would be fully included also at the consolidated situation.

Deductions, SEKm

High leverage ratio despite large deductions

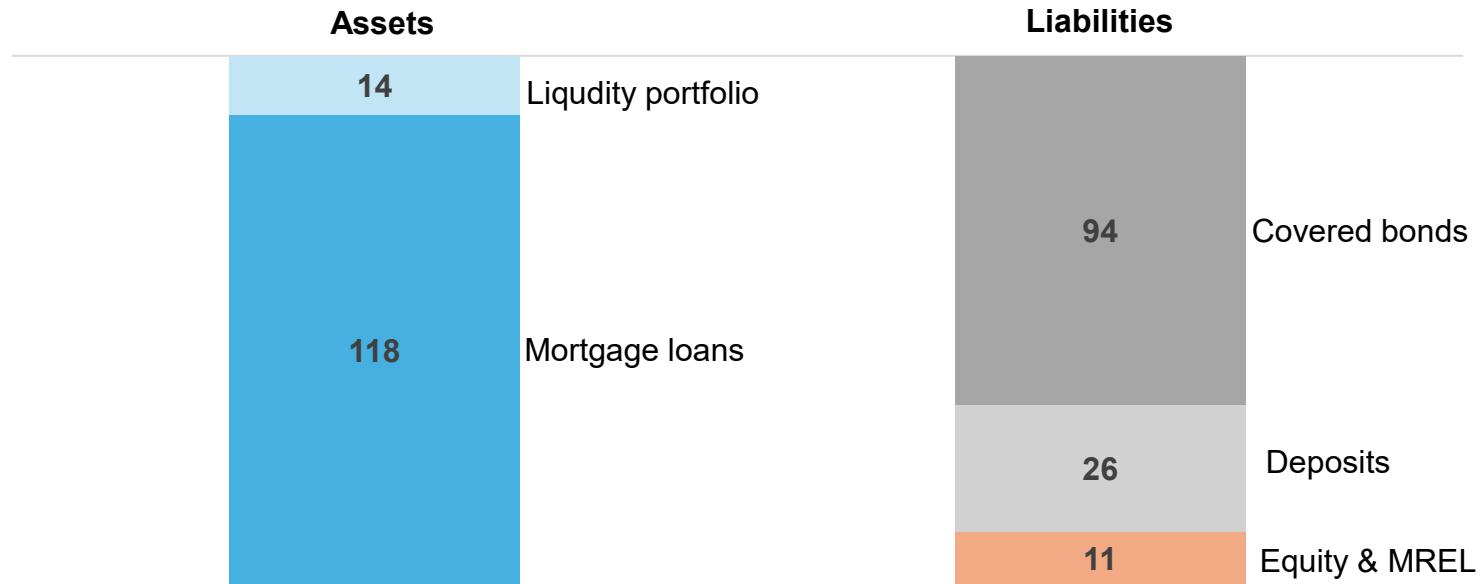

Funding, liquidity and cover pool

In short:

- Landshypotek Bank's low risk business model is reflected in the balance sheet structure
- Landshypotek Bank is subject to full resolution planning and MREL requirement
- Landshypotek Bank takes a conservative funding position
- The cover pool has very low LTV, long seasoning and is geographically well diversified

Core balance sheet structure SEKbn

- Landshypotek Bank's low risk business model also reflected in the balance structure

BRRD implementation

- Landshypotek Bank is critical to financial system

- Swedish National Debt Office (the Resolution Authority) has decided that Landshypotek Bank is subject to full resolution planning and MREL requirement
- SNDÖ preferred resolution strategy: (i) bail in combined with restructuring or (ii) bail in combined with bridge institution
- MREL requirement 2025
 - Total risk weighted 22.30% of REA
 - Total leverage 6.00% of TEA
 - Subordinated risk weighted 19.80% of REA
 - Subordinated leverage 6.00% of TEA
- The plan is to have one outstanding issue per calendar year to have a good balance between granularity and liquidity
- MREL fulfilment Q3
 - Total risk weighted 26.16% of REA
 - Total leverage 8.03% of TEA
 - Subordinated risk weighted 23.29% of REA
 - Subordinated leverage 7.28% of TEA

Total change in cover pool -0.87%

Executive summary:

- Low-risk market leading agriculture and forestry bank with sustainability integrated in the strategy with a market share of 24%
- Sustainable governance where profit is reinvested or returned to the agriculture and forestry sectors
- The bank for the conscious choice of mortgage loans and savings
- A lending portfolio with a positive climate footprint
- Low-risk business model
 - 99.8% of the loan portfolio is first-lien mortgages
 - Average LTV is 44%
 - 99% of the customers have a personal liability
 - Total losses since 1985 SEK 373m, average per year 0.026%

Just a reminder! Long-term trend for population and farm land

Source: UN

- The need for food the coming 20-25 years is double the amount that has been produced during the last 10,000 years
- The demand of agricultural commodities for biofuels use will increase
- Production improvements have compensated for growing population
- Restrictions on pesticides and plant breeding as well as shortage of water put pressure on further efficiency improvements
- There are also higher demands on global production to be more sustainable from an economic, social, environmental and climate perspective
- “Buy land, they’re not making it anymore” (Mark Twain)

DISCLAIMER

Acceptance of limitations: The information in this presentation (the "Material") is furnished by Landshypotek Bank AB (the "Company") solely for the recipient's information. The intended recipients are determined solely by the Company. By attending a meeting where the Material is presented, or by reading the Material, you agree to be bound by the limitations and notifications described below. The Material is strictly confidential and may not be disclosed or distributed to any other person unless expressly agreed by the Company.

Use of the Material: This Material does neither constitute an offer to sell nor a solicitation of an offer to buy any securities, and it does not constitute any form of commitment or recommendation in relation thereto. No representation or warranty (expressed or implied) is made as to, and no reliance should be placed on, the fairness, accuracy or completeness of the information in the Material.

No financial advice: The Company is not giving financial advice to any potential investor, and this Material shall not be deemed to be financial advice from the Company to any potential investor. Investors should not subscribe for or purchase any financial instruments or securities only on the basis of the information provided herein. Investors are encouraged to request from the Company and other sources such additional information as they require to enable them to make informed investment decisions, to seek advice from their own legal, tax and financial advisors and to exercise an independent analysis and judgment of the merits of the Company.

No liability: Although the Company has endeavored to give a correct and complete picture of the Company, the Company cannot be held liable for any loss or damage of any kind arising from the use of the Material.

Information sources: The information in this Material is presented by the Company or constitutes publicly available material and has been produced by the Company exclusively for information purposes. This Material may contain forward-looking statements that reflect the Company's current views with respect to certain future events and potential financial performance. Such statements are only forecasts and no guarantee can be given that such expectations are correct. The information relating to the Company does not constitute a complete overview of the Company and must be supplemented by the reader wishing such completeness.

Actuality: The Material is dated 2026-02-04. The Company cannot guarantee that there has been no change in the affairs of the Company since such date, nor do they intend to, and assume no obligation to, update or correct any information included in the Material. The Material may however be changed, supplemented or corrected without notification.

Prospectus: The Material does not constitute a prospectus for purposes of the Prospectus Regulation (EU) 2017/1129. Accordingly, the Material has not been approved by any supervisory authority. Please see the Company's registered prospectuses at <https://www.landshypotek.se/en/about-landshypotek/investor-relations/investment-programmes/funding-programmes/>

Distribution: The information in this Material is not for release, publication or distribution, directly or indirectly, in or into the United States or any other jurisdiction in which such distribution would be unlawful or would require registration or other measures. No securities referred to in this Material have been or will be registered by the Company under the U.S. Securities Act of 1933, as amended (the "Securities Act") or the securities laws of any state of the United States. This Material may not be distributed into or in the United States or to any "US person" (as defined in Rule 902 of Regulation S under the Securities Act).

Applicable law: The Material is subject to Swedish law, and any dispute arising in respect of the Material is subject to the exclusive jurisdiction of Swedish courts (with District court of Stockholm as court of first instance).
